

Secure Access Control

The only solution today providing the power of law enforcement information to Critical Infrastructure and Key Resources

Security threats can come in many forms and wear many faces. Physical and cyber threats can enter via contractors, vendors, or visitors. In today's world of ever-evolving acts of terrorism, critical infrastructure, industries with sensitive data, schools and universities, and other organizations need to be increasingly vigilant in protecting their resources from an attack. Access control systems abound, but since Critical Infrastructure and Key Resources have no access to law enforcement data, no system provides sufficient information for threat assessment....until now. GREENLIGHT®, a public-private partnership, is the only solution today providing the power of law enforcement information to Critical Infrastructure and Key Resources. GREENLIGHT ensures data privacy by providing users a green or red signal, while simultaneously alerting law enforcement of potential threats.

How GREENLIGHT Works

Security professionals using GREENLIGHT can scan IDs or manually enter information of people, vehicles, and boats. GREENLIGHT then accesses federal National Crime Information Center (NCIC), state and local databases. Users receive a red light or green light signal, indicating whether there is a potential threat. If a red light signal is activated to the critical infrastructure facility, GREENLIGHT sends the red light "hit response" to a supporting law enforcement agency for immediate review. The law enforcement agency will then either take the appropriate action or "greenlight" the individual. GREENLIGHT also features a Person of Interest function.

GREENLIGHT Data Sources

Federal NCIC Sources:

Wanted Person File
Foreign Fugitive File
Missing Person File
Gang File
Terrorist File
Violent Person File
National Sex Offender Registry
Supervised Release File
Immigration Violator File

Protection Order File
Identity Theft File
Protective Interest File
NICS Denied Transaction File
Stolen Vehicle & Boat File

State & Local Sources:

Warrants (where available)
Driver Registration
Vehicle & Boat Registration
Person of Interest Lists

Who Needs GREENLIGHT?

In addition to these 16 critical infrastructure sectors identified by the Department of Homeland Security, campus facilities and private corporations also need to be vigilant in protecting access to secure areas:

Chemical	Emergency Services	Information Technology
Commercial Facilities	Energy	Nuclear Reactors, Materials, and Waste
Communications	Financial Services	Transportation Systems
Critical Manufacturing	Food and Agriculture	Water and Wastewater
Dams	Government Facilities	
Defense Industrial Base	Healthcare and Public Health	

Person of Interest Lists

Customized Person of Interest (POI) lists can be created and maintained in GREENLIGHT. Silent POI alerts also can be emailed to specified staff members, so only designated employees or managers are made aware that an individual is on-premise. Person of Interest lists may be useful in cases of:

- Disgruntled Former Employees
- Protestors
- Domestic Disputes

Added Value

Administrators can generate detailed reports filtered by date, site, user and more. Other optional reporting and analytical tools include:

- Pattern Recognition
- Data Link Analysis
- Data Mapping
- Alerts and Notifications
- Custom Reports

Secure Enterprise Messaging

All GREENLIGHT users are offered DMXLive, a secure, real-time enterprise messaging solution featuring FIPS 140-2 encryption and presence-based instant messaging.

Integrated or Stand-Alone

GREENLIGHT is available as a web service, which can be integrated into your current access control or visitor management system, or deployed as a stand-alone solution.

Quick Facts

- Access controlled, reliable criminal justice data managed by law enforcement
- Receive real-time “red light” or “green light” notification
- Threat detection sends silent alert to area law enforcement
- Person, vehicle and boat identity verification and secure access control
- Patented solution
- Certified Anti-Terrorism Technology under the 2002 Safety Act

Users of GREENLIGHT® are shielded from liability under the 2002 SAFETY Act. Visit safetyact.gov for more information.
